**INTRODUCTION**

**CHALLENGE**

Today the global society faces new challenges. One of the principle ones is where it is moving. Wars, environmental disasters, terrorist attacks, the uncontrolled release of money, etc. OZOTOP offers the humanity to move to self-awareness, complete decentralization, and self-regulation.

**About Our System**

We called our ecosystem OZOTOP. This is the robotic decentralized society model based on the TON blockchain. It's a community of experts regulated by bots (smart-contracts, scripts, algorithms) with own robotic economy

**OZOTOP's MVP will include:**

* voting system

* escrow-service

* dispute resolution system

* rating system

* development of each user professionalism stimulation system

* designer for creating new smart-contracts with a further presentation of the proposed interaction format for general discussion and voting

* Telegram-bots store for different interactions between users

Members of our society will interact with the aid of robots and make payments between each other with OZO token.

In our society model a certain robot manager is assigned to each expert. Robots do not sleep, because they do not need it. They do not get tired and go on working 24/7. These robots (smart-contracts+Telegram bots) are not rude, because they are programmed for positive, efficiency, result!

Some robots will tell you what information you need to provide to get the service quickly. Others will calculate the cost and send you an invoice for payment. Some will convert your form of payment into the one that is convenient for the expert you have applied to. Another robot will act as a guarantor of safe transaction for all parties. Robots fulfill many other functions in our society, too. We will increase the number of robots and their functionality in our society. The number of experts and ordinary users will grow, too!

In our society people will fulfill the functions that require non-standard solutions, intuition, creativity and professionalism. However, the routine work will be automated and robots will be involved. This will provide people with free time they can spend for their self-development and improvement of the society.

The interfaces (a user component) of bots for servicing our society will be built right into the Telegram

messenger. Telegram has a function of implementing  developments in the messenger.

It is well-known that in 2019, Telegram is launching its own TON (Telegram Open Network) blockchain, Telegram Virtual Machine and its own new programming language FIFT.

Since this launch, our robots will be transferred from external servers to the TON Blockchain and the interaction in our society will be carried out by using smart contracts and cryptocurrencies. The society itself will move to full decentralization and self-government.

The OZOTOP project will let you access our society and use all its opportunities and functions on the go by using your smartphone, Telegram and OZOTOP.
It will be a self-regulating society of experts based on Telegram Open Network and supported by robots and bots.

Instead of laws, the interaction in this kind of society will be regulated by smart-contracts, telegram-bots, algorithms, and scripts.

It will be the society free from negativity and fraudsters (everyone will interact through the escrow-service).

It will be a highly efficient and productive society model.

**Objectives of the OZOTOP project**

Over the coming months, Telegram is launching Gram, its own internal cryptocurrency. Users will be able to enjoy instant direct money transfers. The TON blockchain will speed up many socioeconomic processes, they will be implemented through Telegram and, of course, through our OZOTOP project. Telegram will become a more influential and efficient tool for interaction in the society than YouTube and Instagram now.

**ABOUT TOKEN**

OZOTOP tokens at the $1^{st}$ fundraising stage are utility tokens based on the Waves Blockchain with Smart Asset Scripts with automatic listing at the Waves DEX. Fiat Visa/Mastercard, SEPA (USD,EUR) bank transfers and the main cryptocurrencies deposits are available at the Waves DEX. KYC required for fiat money deposites to the Waves DEX

OZOTOP/BTC is available at the Waves DEX. With buying OZOTOP project tokens at the $1^{st}$ fundraising stage, you are buying the rights to receive tokens inside OZOTOP software platform after or before $2^{nd}$ fundraising stage
 All early members will exchange their Waves Blockchain tokens toanother Blockchain tokens for interactions inside OZOTOP software platform with dashboard help at the https://ozotop.io or website of MVP. The property rights and legal protection of the owners will be preserved. After the full-scale Telegram Open Network is launched, it will be moved from the into the TON Blockchain, and the property rights and legal protection of the owners will be preserved.

Before switching to the TON Blockchain, another Blockchain could be used. Ethereum based MVP for example.

**OZO advantages**

The token provides mobility!

This is the effect of social closeness (Telegram is a messenger after all)!

The most community oriented and self-sufficient blockchain (TON)
Instant payments within the society by using OZO tokens

These tokens will be quickly converted into the Gram cryptocurrency.

These are the tokens useful for the society.

The more useful you are for this ecosystem, and in this society, the more people will transfer OZO to you.

Each expert will have his own competency rating. As soon as customers get their service/product, they will leave their feedback and marks.

Disputable situations (Arbitrage) will be considered by all members of the society. They will vote for the party they think to be right. In their turn, the parties will able to prove they are right by providing evidences or using other means of defense.

**Tokenomica Details**

Total supply – 1,123,581,321 OZO
51% of tokens will be frozen for 3 years
Each year in the 4th, 5th, and 6th one, 17% will be released into circulation

**1st fundraising stage**

Hardcap 33.7 BTC, 1% of tokens total supply
Price - 0.000003 BTC per 1 OZO

**2nd fundraising stage**

25% of total OZO tokens supply
280,895,330 OZO with price 0.00003 BTC per 1 OZO

**Advantages of the Blockchain**

- Transparency of all transactions on the platform. All system reporting can be verified

- Process automation through smart contracts

- It becomes convenient to work with cryptocurrencies

- Integration with other projects on the Blockchain (registries, scoring, statistical services), and

- Reliability and resiliency.

## Legal aspects of the OZO token

- Investing funds in OZO tokens is not an investment at the 1$^{st}$ fundraising stage

- Crypto-enthusiasts from that countries where interactions with cryptocurrencies are not prohibited are welcome to the 1$^{st}$ fundraising stage

- The token buyer can use them inside the OZOTOP project. The main purpose of tokens is to be exchanged to expert services inside the OZOTOP ecosystem or creation new societies models, interactions, etc.

- Members of the project are not guaranteed to earn profit.

- OZO Token is designed to be used as an utility token. It is a tool for authorizing access to the OZOTOP software platform.

- There are no restrictions on selling or transferring tokens after 2$^{nd}$ fundraising stage.

- An offer will be a basis for transactions with tokens.

- No dividends or interests are provided to owners of tokens at the 1$^{st}$ fundraising stage.

## TEAM

**Viacheslav Nitsevych,** Founder and CEO of "OZOTOP"

**ROADMAP**

- ❖ Q1 2019 Project concept creation
- ❖ Q2 2019 Team building
- ❖ Q3 2019 MVP creation start
- ❖ Q4 2019 1st stage of fundraising

- ❖ Q1 2020 2nd stage of fundraising
- ❖ Q2 2020 TOP Exchanges listings
- ❖ Q3 2020 Physical and mathematical model of social interactions
- ❖ Q4 2020 Creation of an economic and mathematical model of full OZOTOP project

- ❖ Q1 2021 Self-regulation features implementation
- ❖ Q2 2021 Full OZOTOP project launch
- ❖ Q3 2021 Mobile App creation
- ❖ Q4 2021 Self-development stage

**How big is the market opportunity?**

OZOTOP ecosystem could be used at local communities like some new Blockchain districts or areas also it could be integrated into governments or enterprises management development systems or worldwide globally. Also, such a system of interactions in society can be useful in conditions when the appearance of new factors is difficult or impossible to predict; when decisions must be made quickly and efficiently to create new interactions form between people. For example, during global catastrophes, post-apocalyptic conditions or other planets colonizing.

So, this is a highly scalable project with the same market opportunity
